*Data Scientist with two years experience in
AI research seeks a full time opportunity in Paris*

Skills

Programming Skills:

Python

C++

SQL

Frameworks and Tools: PyTorch TensorFlow Keras
OpenCV Scikit-Learn Numpy Pandas Matplotlib Docker
AirFlow Celery Git Unix Spark AWS

Deep Learning: Computer Vision for Medical Imaging,
Object Re-Identification and Tracking, Autonomous
Driving and Auto-Encoders.

Machine Learning:

- Support Vector Machines 📶
- Decision Trees, Random Forests, AdaBoost 📶
- K-means, Guassian Mixture Models 📶
- Naive Bayes 📶
- K-Nearest Neighbors 📶
- Polynomial Regression 📶
- Logistic Regression 📶
- Linear Regression 📶

English: Fluent

lived in the US

Spanish: Bilingual

hispanic origins

French: Native

mother tongue

Projects

Autonomous RC Car 📹 📺 **2017**
Python, Keras, OpenCV *12 months*

- Built a remote-controlled car able to predict speed and steering angle in real-time from an embedded camera.
- Participated in tournaments and got 3rd at **IronCar** Summer 2018 and 1st at **RobotCars** Winter 2018.

Machine Learning Blog 📄 **2020**
PyTorch, Numpy, Pandas, Seaborn *3 months*

- From scratch implementation of the most used algorithms in machine learning.

Image Processing GPU 📹 **2016**
CUDA C++ *1 month*

- Implemented edge detection and de-noising algorithms from scratch on GPU.

Experience

SIEMENS US 📌 **2019**
Machine Learning Intern, Princeton *14 months*

- Improved physician diagnosis of heart disease by creating a coronary calcium detector trained on CT scans using Unet with Pytorch.
- Improved patient's disease evaluation even further by classifying calcium in high and low risk arteries.
- Optimized model complexity to fit hospital needs by designing a faster approach using ResNet3D.
- Enhanced detection of mitral valve regurgitation by creating a blood flow dealiasing model using Unet trained on 3D color doppler data using Pytorch and C++.
- Automated the training of these algorithms using AirFlow workflows and Celery.

ENGIE 📌 **2018**
Machine Learning Intern, Paris *7 months*

- Improved security of power-plants by designing a multi-camera vehicle re-identification and tracking system using Keras and TensorFlow.
- Implemented 2018 **state-of-the-art** solution and improved mean average precision by **6%** by adapting a pedestrian re-id **paper** to vehicle tracking.
- Designed a framework to automatically re-train on different objects like pedestrian, faces, ect...
- Collaborated with the best researchers in the field after being invited to **ECCV** 2018.

SAP 📌 **2016**
Software Engineering Intern, Paris *5 months*

- Improved the quality of an excel pluggin by designing an automatic testing platform using Python, SQL and Jenkins.

Education

EPITA **2018**
Computer Science, Data Science Major *5 years*
Top 1 computer engineering master degree and most prized machine learning program in France.

Sejong University - South Korea **2015**
Computer Science, Seoul *6 months*
Exchange student program at Sejong University.
